

YOU'RE JUST A CABLE AWAY FROM BIRDS EVERYDAY

The box contains a bag of accessories, pour the contents into a bowl so you don't lose anything.

Screw the big black nut onto the hook. Then screw the hook into the bottom of the EZF (almost all the way in). Tighten the nut keeping the hook straight with a pair of pliers.

The pulley goes on the shaft, flat side first. Line up the Allen screw with the flat side of the shaft and tighten. (Figures 1-2)

You're now ready to hang the cable.

The Easy Feeder - Bird Feeder Carrier Kit

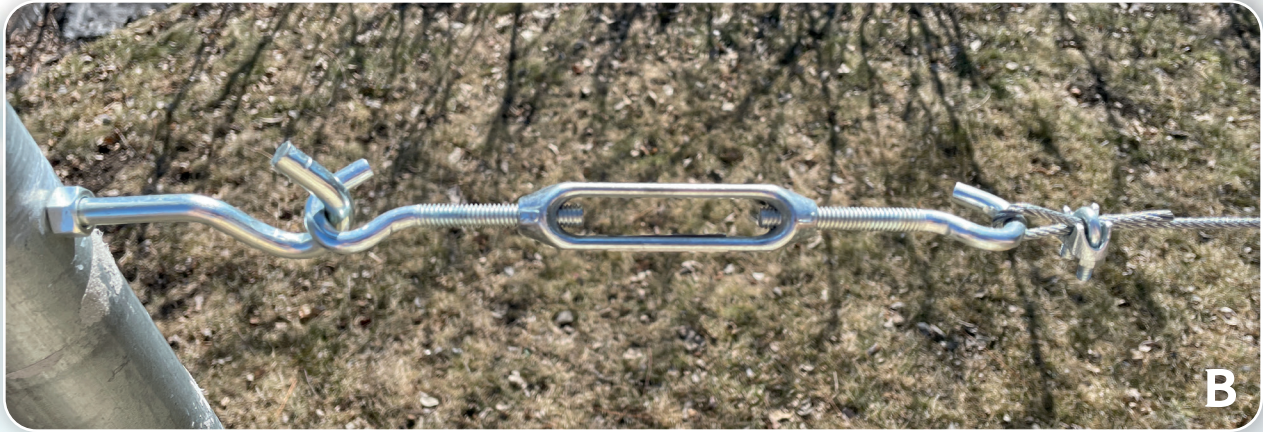

INSTALLATION INSTRUCTIONS

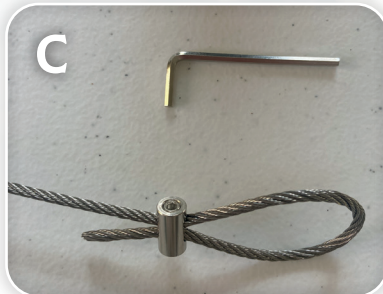

Decide where you want the Bird Feeder to Hang...preferably in a place for easy viewing and away from the deck.

- A)** Drill 5/32 hole to secure the screw hook. Attach open turn buckle or cable to the house using the crimped cable end. Whatever is easier for you, please be careful.

Span out the cable and drill another 5/32 hole in a sturdy structure such as a tree, shed, post, flagpole etc...make this end a few feet higher than the house.

B) OPEN the turn buckle all the way and attach to screw hook.

C) Pull the cable through the cable adjuster as shown, then attach cable around turnbuckle and tighten cable. Tighten Allen screws with provided Allen wrench. Adjust turnbuckle as appropriate. The cable doesn't need to be tight, it's good to have a little sag.

D) Hang the Ezfeeder on the cable, then hang the bird feeder on the Ezfeeder.

To power up the Ezfeeder push the #1 button, now the remote control will work.

Tools not provided for the installation:
Cordless drill, 5/32 drill bit. Something to cut cable if desired.

To charge the **EZfeeder** simply take it off the cable, power down the EZfeeder and plug the charger in. When the light turns green the EZfeeder is fully charged.
